FIDÈLE TOGBÉDJI ZOGBE

DATA SCIENCE & MACHINE LEARNING

● Seeking internships & remote collaborations

PROFILE

Third-year **engineering student in Computer Science and Telecommunications** at EPAC, Benin. I apply **Python and machine learning** to telecom and infrastructure data, aiming to solve real infrastructure problems in Benin and West Africa. I publish my work on GitHub and Kaggle and study data science independently alongside my degree.

EDUCATION

Engineering degree — Génie Informatique et Télécommunications — 2024 – 2029

EPAC, Université d'Abomey-Calavi, Benin · third year (expected graduation 2029)

Coursework in cybersecurity, software engineering and telecommunications. Data science specialisation pursued independently, outside the curriculum.

DataCamp — Associate Data Scientist track — Ongoing

Self-directed learning

Python, pandas, NumPy, Matplotlib, SciPy and scikit-learn, applied in personal projects.

Baccalauréat, Série D (Biology-Geology) — 2024

CEG 4 Bohicon, Benin

Mention Très Bien — 16.86/20 overall, with **20/20 in Mathematics**.

PROJECTS

Predicting Mobile Network Coverage Gaps in Benin IN PROGRESS

Combines OpenCellID cell-tower data with population data to identify underserved areas and recommend where infrastructure investment should go first.

Stack · Python, pandas, scikit-learn, folium, Plotly, Google Colab

Telecom Customer Churn Prediction IN PROGRESS

Predicts which customers are likely to leave an operator (BigML dataset: 3,333 customers, 20 features). Exploratory analysis followed by a comparison of classification models.

Stack · Python, pandas, scikit-learn, Matplotlib

Football Club Financial Analysis COMPLETED

Analysis of 52 European clubs (2010–2026): revenue growth (CAGR), the metrics most correlated with profitability, and an object-oriented data-access class built on pandas.

Stack · Python, pandas, OOP · github.com/fidele-zogbe/Club_Financial

Python Games & Tools PUBLISHED

Space Shooter and **Vampire Survivor** — two arcade games with enemy waves, collisions, scoring and upgrades. **Advanced Calculator** (in progress) — a desktop calculator modelled on the Ubuntu one, built mode by mode.

Stack · Python, object-oriented design, game development

PLANNED NEXT Crop disease detection · Flood & rainfall prediction · Fon/Yoruba NLP
